SUMMARY

Innovative AI Researcher and Machine Learning Developer with experience creating impactful AI-first solutions in computer vision and deep reinforcement learning. Developed production-ready financial AI tools using Python, C/C++, and Java. Eager to leverage programming expertise and data analysis skills in the Specialist Programmer / Digital Specialist Engineer track.

EDUCATION

B.Tech, Artificial Intelligence (AI & ML) — VIT Bhopal University, Bhopal, MP 01/2027
Registration No: 23BAI10866 | CGPA: 7.56 | Relevant Coursework: Design & Analysis of Algorithms, Database Management Systems, Machine Learning, Deep Learning, Linear Algebra

Senior Secondary & Secondary Education — Seth M.R. Jaipuria School, Lucknow 01/2023
Class X: 90.5% | Class XII: 84.5%

EXPERIENCE

AI ML Engineer — MPOne Limited May 2026 – Jul 2026
Internship, Remote

- Worked as an AI/ML Engineer intern, contributing to applied machine learning tasks and completing the internship with a Certificate of Completion.

SKILLS

- Programming Languages:** Python, C++, Java
- AI & ML Tools:** PyTorch, TensorFlow, Keras, Scikit-learn
- Deep Learning Architectures:** CNN, LSTM, YOLOv8, Neural Networks
- Computer Vision:** OpenCV, PIL/Pillow, Video Analytics, Object Detection
- Data Analytics:** Pandas, NumPy, Matplotlib, Seaborn
- Cloud & Databases:** AWS, MySQL, PostgreSQL
- Data Management:** SQL Pipelines, Data Cleaning, ETL Pipelines
- Frameworks & AI Systems:** FastAPI, WebSockets, RAG Systems, ChromaDB
- Dev Tools:** Git, GitHub, Raspberry Pi, Data Structures & Algorithms

KEY AWARDS & ACHIEVEMENTS

- National Finalist** | Meta PyTorch OpenEnv Hackathon (Scaler School of Technology) April 2026
- Secured a position in the Top 800 Finalists out of an intensive pool of 31,000+ registered teams nationwide.
 - Selected to advance to the grand finale in Bangalore to build an OpenEnv and pitch production-ready AI solutions directly to industry experts and Meta validation engineers.

PROJECTS

- The Architect — Deep RL Architectural Optimizer** *Python, PyTorch, Deep Reinforcement Learning*
- Developed an end-to-end Deep Q-Network (DQN) system incorporating custom reward-shaping algorithms to fully automate residential floor plan layout generation.
 - Optimized space configurations based on geometric, spatial compactness, and accessibility criteria, drastically reducing design iteration times.
- FinMarket — Real-Time Financial Market Analytics Platform** *FastAPI, WebSockets, Deep Learning*
- Architected a high-throughput live dashboard for real-time technical indicator computation (RSI, MACD) and streaming anomaly detection.
 - Integrated dual-model ensembles utilizing ARIMA and Recurrent Neural Networks (RNNs) for time-series forecasting and structural risk scoring.
- Customer_Behaviour — Customer Segmentation & Churn Prediction Pipeline** *Scikit-learn, Pandas, NumPy, Matplotlib*
- Built an end-to-end data pipeline implementing K-Means clustering based on RFM (Recency, Frequency, Monetary) metrics to perform robust customer behavior analysis.
 - Engineered a 32-metric feature extraction layer and trained ensemble machine learning models to predict churn and generate automated targeted marketing retention strategies.

CERTIFICATIONS

- Applied Machine Learning in Python — Coursera
- Cloud Computing — NPTEL
- Google IT Support Professional Certificate — Credly Digital Badge
